

Day 1 | Check an AI-assisted email

All names, dates and details in this exercise are fictional. This is not an actual college event.

Goal: Turn a planning memo into a clear email without inventing facts. Work alone or in pairs. You may use one phone, paper or an available AI tool. Do not send the email.

15 minutes in the session: read 3 + correct 5 + verify 6 + share 1. Sections 5 and 6 are for you to try afterwards.

1. Source memo - your only source

M1	Sender: Training Office, Example College (fictional). Readers: office colleagues.
M2	Purpose: invite colleagues to express interest in an optional Clear Files briefing.
M3	Proposed date and time: 16 November 2027, 14:00-14:30. These are not final.
M4	No room has been assigned.
M5	Approval from the office manager is still pending.
M6	Interested colleagues may reply. No reply deadline has been set.
M7	Include this reminder: Please do not send student or staff records.
M8	Send a planning update only. Booking is not open.

2. Practice draft - deliberately wrong

This draft was written for this worksheet. It is not a captured answer from an AI service.

Subject: Approved Clear Files briefing - reply by 12 November

Dear colleagues,

Confirmed briefing

The office manager has approved the Clear Files briefing for 16 November 2027, 14:00-14:30, in Room 204. All office staff must attend.

Book now

Reply by 12 November 2027 at 17:00 to reserve your place. The manager will probably allow refreshments. Please do not send student or staff records.

Best regards, Training Office

3. Make a safer draft

With AI: Paste only this fictional memo and practice draft, then the prompt below - material first, instruction last. Use the prompt once. **Without AI:** Correct the practice draft on paper or in phone notes. In a pair, one person edits and the other checks M1-M8; then swap roles. Both routes have the same goal.

Prompt: Using only memo M1-M8, correct the practice email. Write a 60-100-word body, excluding the subject, headings and sign-off. Add a subject and two short headings. Preserve uncertain information and optional attendance. Add no room, approval, deadline or benefit that the memo does not support. List unresolved items separately. Draft only; do not send.

Only use this fictional case. Do not paste real workplace messages, names or records. Move to page 2 to check every important detail yourself.

Verify, choose and apply

All exercise details are fictional. Keep your own work; it is not collected.

4. Match claims to the memo (6 minutes)

Use **F** = fixed in the memo; **U** = still open or proposed; **I** = inferred, invented or contrary to the memo. For each item, write the source line, status and safe wording. Use "none" when the memo gives no support.

Detail to check	Source	F / U / I and safe wording
Readers: office colleagues		
Proposed date/time: 16 Nov, 14:00-14:30		
Room 204		
Manager has approved the briefing		
Reply by 12 Nov at 17:00		
Refreshments will probably be allowed		

Also check: Is attendance optional? Is booking open? Does the records reminder remain?

Share (1 minute): Tell your partner one unsupported detail you removed.

5. Quick check - try afterwards (one answer each)

1. What is the approval status in M5?

A) Granted. B) Still pending. C) Not required.

2. Which phrase preserves M2?

A) Everyone must attend. B) Reserve your place now. C) An optional briefing.

3. The draft adds a reply deadline. What should you do?

A) Remove it; no deadline is set in M6. B) Choose a convenient date. C) Keep it if it sounds polite.

4. What may you paste into AI for this exercise?

A) A real student record. B) A real staff email. C) Only the fictional case.

5. What makes a draft ready for the exercise?

A) Fluent English alone. B) A human source check and clear uncertainty. C) Two AI tools agreeing.

6. Apply it afterwards: write the corrected email

Write a 60-100-word body, excluding the subject, headings and sign-off. Add a subject and two short headings. Below the email, list unresolved items separately. Check M1-M8 and keep uncertain details clear.

Subject: _____

Complete: "Before using an AI draft, I will check _____ against _____."

Day 1 | Which material can we use here?

Eight fictional cards for a 15-minute teaching activity. These are descriptions of invented documents, not real records or institutional policy. All eight descriptions themselves may be used as teaching material.

Classify the underlying document described in each card. Explain why. **Removing names alone does not establish permission.**

A	suitable for this workshop
B	check permission and the approved environment first
C	do not use it in this workshop - use a fictional substitute

Card	Fictional document description	Your choice (A / B / C) and reason - for B or C, add a safe substitute
1	A public, reusable opening-hours notice. Its owner explicitly permits reuse.	
2	A made-up planning memo written for this exercise; no real people or events.	
3	An unpublished internal staffing plan. No one has checked the institution's AI rules.	
4	A student support record containing a name and private circumstances.	
5	A partner's confidential draft contract. The permission to share has not been checked.	
6	A staff complaint with the name removed but a unique role and incident still present.	
7	A purchased e-book PDF with no established permission for upload or redistribution.	
8	A public policy webpage, but its date and reuse conditions have not been checked.	

Timing: explain 2 min; classify in pairs 6; compare reasons and choose safe substitutes 5; share one rule 2. Total 15 min. Paper and phone routes are equivalent; no AI or login is needed.

For this workshop use only the supplied fictional material and cleared public extracts. An A classification is not a claim that an AI output is accurate. B is not automatic permission. C does not mean every use is prohibited in every institutional environment.
